## Project Definition

The objective of this project is to provide a career services platform where the students (people looking for jobs) will be able to post and update their portfolio and the employers should be able to post jobs. With the help of this, you can carry out a job head hunting in your own comfort. This benefits job-seeking candidates and employers to shortlist their potential job and employee respectively. This can also help employers find specific candidates as per their requirements along with job seekers being able to tailor their profile as per the market..

## User Stories Backlog for Sprint 3

User Story/Product backlog	
1	As a candidate I want to track the post by all employers so that I can get updated about all the happenings
2	As a employer I want to track application by candidates so that I can find out the candidate easily
3	As an admin I want to manage all user profile so that I can search and update them as required
4	As an admin I want to manage all job posting by employers so that I can search and update them as required

## Open Issues

We will implement the below issues in Sprint 3:

- As an admin I want to view or modify all the users in the system so that I can maintain the system
- As an employer I want to send notification to selected candidate so that they can be informed about their interview
- As an employer I want to select a candidate for interview so that I can proceed with the recruitment process
- As an employer I want to browse all the candidates so that I can request them for application
- As an admin I want to add new employer or candidate so that they login to the system to perform their task
